Installation Instructions for DDM Dominator® Tuned Pipe for Kraken Vekta.5

Congratulations on your purchase of a Dominator® Tuned Pipe! Installation is quick, easy, and requires no drilling or modification to your vehicle.

The pipe manifold is pre-installed with 3 Viton O-Rings, the 3 O-rings included with the hardware kit are extras you can keep and use as needed.

To install the pipe, first bolt the manifold to the cylinder head, using the black M5X20 mounting bolts, washers, and lock washers. Make sure you also install the exhaust gasket between the cylinder and the aluminum exhaust header.

Then, attach the clamp to the center bar of the Vekta. Put the sandwich mount in between the pipe bracket and clamp, as shown.

Slowly tighten all hardware connections to ensure a sturdy, solid fit. Installation is now complete. Enjoy the powerful performance gains your DDM Dominator® Tuned Pipe will give your Vekta.5!
